

# Installing A Net

1. Connect one end of the net cable to the cleat on the dead end post (post without the reel). Place the cable over the top of the dead end post and stretch it to the live post (post with the reel).
2. Pull the cable over the top of the live end post and insert it into the reel.
3. Inside of the reel will be a pin to hook the loop on the end of the net cable to.
- 4; Slowly begin to tighten the cable making sure the cable has not come loose from the pin or the tops of the posts.
5. Tighten the net to raise it to a height of 3' at the center of the net. **DO NOT OVER TENSION THE CABLE – YOU CAN BEND YOUR POSTS!**
6. Insert the dowels provided into each end of the net.
7. Adjust the center strap to maintain the height of 36" in the center of the net.
8. Lacing cord can be installed by looping the cord through the grommets and around the lacing rod or net post and pulling tight.

TYPICAL ELEVATION OF A PROPERLY LACED NET
